

AMENDMENTS TO THE CLAIMS

1. (Cancelled)
2. (Previously presented) The polypropylene film according to Claim 16, wherein the base layer contains an isotactic polypropylene having a melting point of 155-165°C.
3. (Previously presented) The polypropylene film according to Claim 16, wherein the base layer contains the hydrocarbon resin in a quantity of 5 to 20 weight-percent, in relation to the weight of the base layer.
4. (Previously presented) The polypropylene film according to Claim 16, wherein the hydrocarbon resin contains a non-hydrogenated styrene polymer, a methylstyrene-styrene copolymer, a pentadiene polymer, a pentadiene and cyclopentadiene copolymer, cyclopentadiene polymer, an α-pinene polymer, β-pinene polymer, colophony or colophony derivatives or terpene polymers and hydrated compounds thereof, or hydrated α-methylstyrene-vinyl toluene copolymer or mixtures thereof.
5. (Previously presented) The polypropylene film according to Claim 16, wherein the hydrocarbon resin has a softening point of 100 to 160°C.
6. (Previously presented) The polypropylene film according to Claim 16, wherein the first cover layer is synthesized from isotactic propylene homopolymers, propylene copolymers, or propylene terpolymers or mixtures of these polymers, the propylene copolymers and terpolymers having a propylene content of at least 80 weight-percent in relation to the polymer.
7. (Previously presented) The polypropylene film according to Claim 16, wherein the surface of the first cover layer is pretreated using corona, plasma, or flame.
8. (Previously presented) The polypropylene film according to Claim 16, wherein the second cover layer made of polyolefinic polymers.
9. (Previously presented) The polypropylene film according to Claim 16, wherein a release layer is applied to the surface diametrically opposite the first cover layer as the outer layer, whose surface has a low adhesion in relation to cold sealing coatings.

10. (Previously presented) The polypropylene film according to Claim 9, wherein the release layer is a release lacquer, a release film, or a second coextruded cover layer.
11. (Previously presented) The polypropylene film according to Claim 16, wherein the base layer contains an antistatic agent.
12. (Previously presented) The polypropylene film according to Claim 16, wherein all layers of the film contain neutralization agents and stabilizers.
13. (Previously presented) The polypropylene film according to Claim 16, wherein the first cover layer contains antiblocking agent.
14. (Withdrawn) A method for manufacturing a polypropylene film according to Claim 16, wherein the coating of the biaxially oriented film with the cold sealing adhesive is performed in the gravure printing method.
15. (Previously presented) The polypropylene film according to Claim 11, wherein said antistatic agent is tertiary aliphatic amine.
16. (Currently Amended) A multilayered transparent biaxially oriented polypropylene film which comprises

a base layer,

a first cover layer wherein the first cover layer comprises 95 to <100 weight-percent propylene polymers, in relation to the weight of the cover layer and optionally an antistatic agent, a neutralizing agent, an antiblocking agent and /or a stabilizer, and

a second cover layer,

wherein the base layer has a hydrocarbon resin and the first cover layer has a cold sealing adhesive coating on its outer surface and the second cover layer is applied to the diametrically opposite surface of the base layer and the base layer is between the first cover layer and the second cover layer is between the base layer and the first cover layer.

17. (Previously presented) The film as claimed in Claim 16, wherein the first cover layer has a thickness greater than 0.1 μm .
18. (Previously presented) The film as claimed in Claim 16, wherein the first cover layer has a thickness in the range from 0.3 to 3 μm and the second cover layer has a thickness from 0.5 to 2 μm and the film has a total thickness from 4 to 60 μm .
19. (Previously presented) The film as claimed in Claim 16, wherein the first cover layer has a thickness in the range from 0.4 to 1.5 μm and the second cover layer has a thickness from 0.5 to 2 μm and the film has a total thickness from 6 to 25 μm .
20. (Currently Amended) The film as claimed in Claim 19, wherein the first cover layer is synthesized from isotactic propylene homopolymers, propylene copolymers, or propylene terpolymers or mixtures of these polymers, the propylene copolymers and terpolymers having a propylene content of at least 80 weight-percent in relation to the ~~polymer made~~ polymer made of propylene polymers and the first cover layer further contains at least one additive selected from the group consisting of antistatic agent, neutralization agent, stabilizer, and antiblocking agent.
21. (Previously presented) The polypropylene film according to Claim 20, wherein a release layer is applied to the surface diametrically opposite the first cover layer as the outer layer, whose surface has a low adhesion in relation to cold sealing coatings.
